

Telegram, *in six questions.*

For those discovering the app: the essentials, then installation in four steps.

What is Telegram?

A free messaging app: messages, calls, groups and channels. It exists on iPhone, Android, computer and in the browser, and one account can be used on several devices at once.

What do you need to open an account?

A phone number that receives SMS: Telegram sends a login code to it. That number is the account identifier; it can stay hidden from other users (privacy settings).

Is it safe?

What really protects the account is you: turn on **two-step verification** (a password on top of the SMS) and never give your login code to anyone. A message asking for it is an attempt to steal the account.

How much does it cost?

Nothing. Downloading and using Telegram is free, with no subscription. The paid "Telegram Premium" option exists but is not needed.

Channel, group, mini-app?

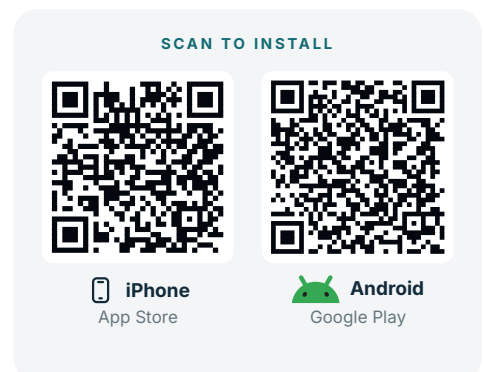

A **channel** broadcasts announcements you read. A **group** lets several people chat. An **automated account** (NeuralBet) replies when you write to it. A **mini-app** is a small application that opens inside Telegram, with nothing else to install: that is where the NeuralBet program is followed.

And on a computer?

Telegram also exists on Mac and Windows, and at web.telegram.org. You log in by scanning, with the phone app (Settings → Devices), the QR code shown on the computer.

Install Telegram in four steps

- 01 **Download the official app:** "Telegram Messenger" on the App Store, "Telegram" on Google Play. Publisher: Telegram FZ-LLC, nothing else. The QR codes opposite open the right page directly.
- 02 **Enter your number:** open the app, tap "Start Messaging", choose your country and type the number of the SIM that will carry this account.
- 03 **Enter the code you receive:** by SMS on that number (or in Telegram, if the account is already open on another device).
- 04 **Enter your first name:** a photo if you like, and the account is ready.

Where it all happens: the NeuralBet program is followed in Telegram, from the account linked to this program. No other app to install.

The risks, *and how to protect yourself.*

A Telegram account is rarely stolen by hacking: almost always because someone gave away their code or lost their phone. Five settings close those doors.

What can happen

Someone gets your code

A fake "support", a fake prize, a fake link asks for the code you received by SMS: with it, your account is opened elsewhere.

Your phone is lost or stolen

Unlocked, it opens Telegram, and so NeuralBet.

Your number is hijacked

A fraudster has your number moved to their own SIM card and receives your codes instead of you.

A fake account writes to you

A fake account or a fake NeuralBet "advisor" contacts you first and asks for money or a code.

The five settings

01 Two-Step Verification

Settings → Privacy and Security → **Two-Step Verification**. A password on top of the code, plus a recovery e-mail. Write the password down: without it or that e-mail, you cannot get back in on a new device.

02 Passcode and biometrics

Same menu → **Passcode Lock**. Telegram locks itself, Face ID or your fingerprint reopens it: a stolen phone no longer gives access to your chats.

03 Passkey

Same menu → **Passkeys**. Log in with Face ID or fingerprint, no SMS to wait for; the key follows you to a new phone through iCloud or Google.

04 Login e-mail

If Telegram offers to add a login e-mail, accept: codes can arrive there when the SMS does not.

05 Devices

Settings → **Devices**: everything connected to your account. An unknown device? Terminate its session.

THE GOLDEN RULE

Nobody, not Telegram, not NeuralBet, not your sponsor, needs your code or your password. Whoever asks for them wants your account. Only open NeuralBet through your sponsor's link.

Always a backup, *never locked out.*

Your NeuralBet account is tied to your Telegram account, not to the phone: as long as you keep access to Telegram, you keep everything.

THE BACKUP ACCESS

Also install Telegram on your computer or a tablet, with the same account. Login codes arrive there first, and from there you cut off a lost phone in one minute.

Computer

Download Telegram from
desktop.telegram.org (or open
web.telegram.org).

Connection

With the phone app: Settings → **Devices**,
then scan the QR code shown on the screen.

Tablet

Install Telegram and enter your number: the
code arrives in Telegram on your phone.

If you lose your phone

With a backup (computer, tablet)

- 01 Settings → **Devices**: terminate the lost phone's session.
- 02 Call your carrier: block the SIM, get a new SIM card with your number.
- 03 On the new phone: your number, the code (on the computer, by SMS or by e-mail), your password. Everything comes back, NeuralBet included.

Without a backup

- 01 Call your carrier: block the SIM, get a new SIM card with the same number.
- 02 On the new phone: Telegram, your number, the code by SMS (or your passkey), your password.
- 03 Settings → **Devices**: terminate the old phone's session.

Remember

The password

Keep it off the phone, on paper at home. With the recovery e-mail, it is your spare key.

Two accounts?

Each account has its own password and settings: secure both.

Your number

Keep the line active: a cancelled number is eventually given to someone else.

Two accounts, *one phone.*

NeuralBet offers two referral programs: 4 tiers (Europe) and 10 tiers (emerging countries). Following both? Each runs on its own Telegram account: you need two numbers, not two phones. One program only: one account is enough, you are done.

THE RULE

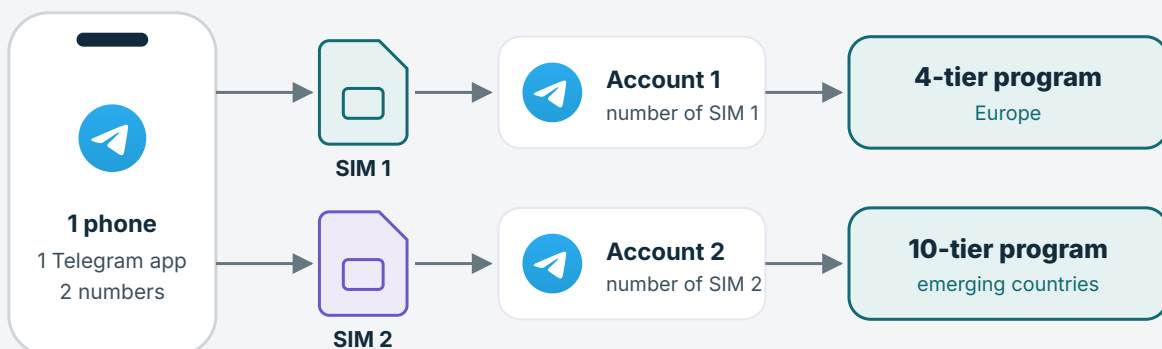

One number = one account. Up to three accounts in the same app.

ACCOUNT 1

4-tier program — your usual Telegram.

ACCOUNT 2

10-tier program — the second number.

One number = one Telegram account = one program. Both accounts live in the same app, on the same phone.

Before you start

A second active SIM

SIM card or eSIM, with a number that belongs to you. A dual-SIM phone is enough.

It receives SMS

The login code arrives by SMS on that number. A data-only plan is usually not enough.

A number still free

A number already linked to a Telegram account cannot carry a second one.

GOOD TO KNOW

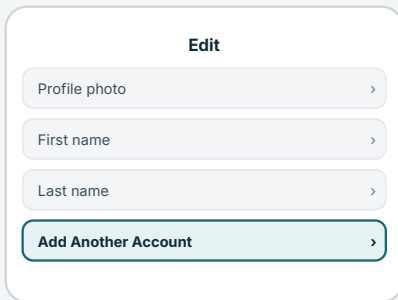

Free virtual numbers found online are very often rejected by Telegram: use a real carrier number (an eSIM can be ordered online and activated in minutes). With two phones the procedure is the same: one account per device, with two different numbers.

The second account, *in six taps.*

Same logic on iPhone and Android: add an account, enter the second SIM's number, type the code you receive.

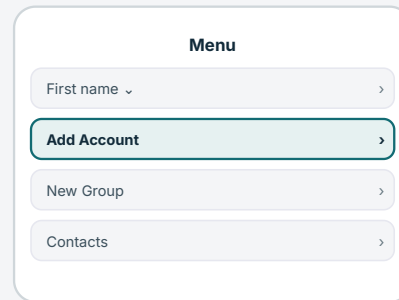

iPhone iOS

- 01 Open Telegram and tap **Settings** (bottom right).
- 02 Tap **Edit**, top right.
- 03 Tap **Add Another Account**.
- 04 Enter the **second SIM's** number, then **Next**.
- 05 Type the **code received by SMS** on that SIM.
- 06 Give the account a first name. Done.

Android ANDROID

- 01 Open Telegram and tap the **≡ menu** (top left).
- 02 Tap the **small arrow** ▾ next to your name.
- 03 Tap **Add Account**.
- 04 Enter the **second SIM's** number, then **Next**.
- 05 Type the **code received by SMS** on that SIM.
- 06 Give the account a first name. Done.

SWITCHING BETWEEN ACCOUNTS

iPhone: Settings → tap the other account, shown at the top of the list.

Android: ≡ menu → tap the other account, shown at the top of the menu.

Notifications from both accounts arrive on the same phone; the name of the active account stays visible at the top of the menu.

LINKING EACH ACCOUNT TO ITS PROGRAM

Account 1 → 4-tier program. **Account 2** → 10-tier program.

Before opening a NeuralBet link, check that you are on the right account: the link opens in the account that is active when you tap it.

Best practices

A different name for each account

For example "Name · 4" and "Name · 10": impossible to mix them up.

Two-step verification on both

Settings → Privacy and Security → Two-Step Verification.

The right account before each link

A link tapped from the wrong account signs up the wrong account.

The login code is never shared

Nobody needs it, not even a "support" team. Whoever asks for it wants your account.
